FLEXIBLE DESIGN SOLUTIONS

Every classroom needs to be a dynamic environment for students. When considering that multiple classes will be using the same environment, the obvious challenge is how to adapt that space to the needs of each group and personalities within those groups. The key to meet all of these needs is flexibility. A more flexible and adaptable classroom also allows space to be tailored specifically to the purpose of each class. For example, sections can be cordoned off for quiet reading, individual research or group discussions.

OUR SOLUTIONS

Portable room dividers provide a physical barrier as well as noise reduction properties that offer seclusion and removes potential distractions within a classroom. They provide an environment that promotes productivity instead of derail it. By using mobile dividers, one multi-purpose classroom can be transformed into a dual activity space, a group learning area, break-out space or a one-on-one student and teacher area in a matter of seconds. Portable dividers also open the door for a variety of space options beyond dividing a classroom.
