LARGE SIZE, LOW PRICE

Our Operable Walls provide an affordable alternative to track-mounted partition and will not require HVAC or building code permits for installation. At three heights up to 12'3" and widths of up to 19'6", this wall-mounted, floor-based, articulating partition covers large expanses while maintaining a sleek modern look.

Combine two Operable Walls and divide a space of up to 39'. Because of its unique sliding hinge design, this partition is a breeze to open and close. The flexibility of the hinges also allow for slight vertical movement of each panel, which allows the divider to remain stable and slide across uneven flooring. Durable, rolling casters provide 2.5" of ground clearance, while a full-sized end panel provide added stability.

Choose from more than 20 stylish fabrics, all pushpin-accepting and sound absorbing, and several easy-clean laminate options. The Operable Wall is sure to do the tough job of dividing your large space while making your space look great.
