

Hardware included:

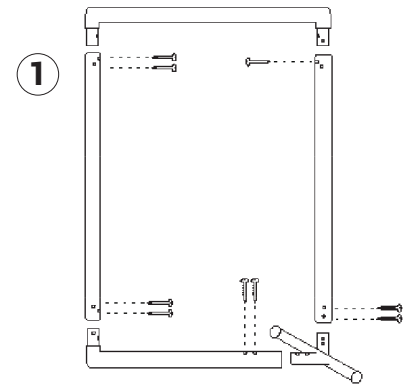

Screws

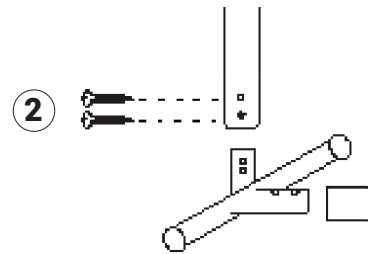

Step 1:

Connect poles as shown using the screws. Only one leg is required if directional flexibility is desired. With one leg you can easily flip your panel from vertical to horizontal.

Step 2:

The Two-Way Standing Divider comes with an optional second leg. If two legs are desired for a secure, static position, install the second leg in desired location in place of a corner piece while connecting the other parts of the frame in Step 1.

Step 3:

Add on canvas exterior using Velcro attachments around the poles.
